UK Work Authorisation: Student visa valid until 30 September 2026; Graduate visa application planned after official course completion

Professional Summary

Backend Software Engineer with 3+ years of experience building production SaaS, payment, identity, and marketplace systems using TypeScript, Node.js, NestJS, Fastify, and Laravel. Delivered a cross-database synchronisation service that reduced processing time by 18%, OAuth 2.0 SSO across four applications, and production Stripe subscription workflows. Experienced with AWS, SQL and NoSQL databases, Redis, Docker, and automated testing, with additional frontend experience in Angular and React.

Technical Skills

Languages: TypeScript, JavaScript, PHP, Python, SQL
Backend: Node.js, NestJS, Fastify, Express.js, Laravel
Databases & Caching: PostgreSQL, MySQL, Microsoft SQL Server, MongoDB, Redis
Cloud & DevOps: AWS (EC2, S3, RDS), Docker, GitHub Actions, CI/CD, Git
Architecture & APIs: REST APIs, Microservices, OAuth 2.0, JWT, RBAC, Multi-tenant SaaS
Testing & Data Access: Jest, Prisma, TypeORM, Eloquent ORM
API Tooling & Integrations: OpenAPI/Swagger, Stripe, OneSignal, Resend
Frontend: Angular, React, HTML, CSS

Experience

Software Engineer (Freelance) – Keture (Pvt) Ltd, Sri Lanka (Remote) Jul 2023 – Present

- Designed and built the end-to-end backend for Deal Partner, a property and vehicle marketplace, using Fastify and MySQL; delivered administration and public APIs, AWS S3 media storage, and transactional email through Resend.
- Developed staff, labour, client, and purchase-order modules for a construction management platform supporting 100+ users across 20+ active projects; automated payroll and purchase-order-to-supplier-payment workflows using Fastify, Prisma, RBAC, and OpenAPI/Swagger.
- Designed a multi-channel notification service for a multi-tenant SaaS platform using NestJS and TypeScript, integrating OneSignal and Resend with reusable templates, queued batch dispatch, retry handling, and Jest unit tests.

Developer (Full-time Contract) – Boss Boleh Sdn. Bhd., Malaysia (Remote) Jan 2024 – Dec 2024

- Migrated a legacy procedural PHP data-synchronisation system to Laravel MVC, reducing synchronisation time by 18% across MySQL and Microsoft SQL Server while processing 3,000+ company records in production.
- Developed the Stripe Checkout and recurring-subscription backend for a live SaaS e-invoicing platform serving 1,000+ customers, covering plan changes, cancellations, invoice handling, renewals, and failed payments; secured webhook processing with signature verification, idempotency, and retries while collaborating with a 10-person team.

Experience

Junior Developer (Full-time Contract) – YYC taxPOD, Malaysia (Remote) May 2023 – Dec 2023

- Built and deployed a centralised OAuth 2.0 SSO provider and client using Laravel Passport, unifying authentication across four production internal applications used by 25+ engineers; implemented secure HttpOnly/SameSite cookies, token refresh and revocation, and role-based access control.
- Built a Laravel knowledge-sharing platform used by 25+ engineers, with Markdown authoring, MySQL full-text search, and arbitrarily nested documentation, centralising technical knowledge and reducing repeated problem-solving across the team.

Trainee Software Engineer – Scienter Technologies (Pte) Ltd, Sri Lanka (Hybrid) Aug 2021 – Mar 2022

- Developed 10+ responsive Angular modules for a production Loan Origination System within an eight-person engineering team, supporting customer application and internal processing workflows in a regulated financial product.
- Built .NET Framework REST APIs for validated form submissions and secure file uploads, enforcing input, file-type, and file-size validation with SQL Server persistence.

Projects

Stripe Subscription & Billing API *Personal Project*

github.com/sachchin06/laravel-stripe-subscription-api

- Built a Laravel 12 REST API covering the complete Stripe subscription lifecycle: Checkout, recurring renewals, upgrades and downgrades, cancellations, failed-payment handling, refunds, and invoice history; documented endpoints with OpenAPI/Swagger.
- Structured the application using the Action-Domain-Responder pattern, thin controllers, and typed DTOs; integrated signature-verified webhooks and idempotent database-queued jobs to synchronise Stripe state with MySQL, with API authentication through Laravel Sanctum.

Movie Ticket Booking System *Personal Project – In Progress*

github.com/moviebooking-platform/moviebooking-backend

- Developing a seven-service cinema booking platform in NestJS and TypeScript within an npm workspaces monorepo; completed five services (Identity, Theatre, Movie, Show, and Booking), containerised with Docker using SQL Server and Redis, and provisioned RabbitMQ for the pending Notification service.
- Implemented JWT authentication with Redis-backed refresh-token rotation and bcrypt hashing, role-based access control, and multi-tenant isolation; created reusable guards, interceptors, filters, and DTOs, with architecture and local setup documented in the repository README.

Education

MSc Data Science – University of Hertfordshire, UK Jan 2025 – May 2026

Official results expected by the end of July 2026

- **Research project (90%):** A Comparative Evaluation of OCR Models for Automated Data Extraction from Handwritten Loan Application Forms.

BSc (Hons) Software Engineering – University of Kelaniya, Sri Lanka Feb 2019 – Jul 2023

Second Class Honours (Upper Division) | GPA: 3.54/4.00
